

THE EVANOSKY  
FOUNDATION

*We Win in the End*

October 2008

*Bob (left) and Sonya Evanosky of The Evanosky Foundation present a check to Dr. Robert Vogt of the Newborn Screening Branch of the CDC Division of Laboratory Sciences.*

The Evanosky Foundation is proud to announce a new collaborative relationship with the CDC Foundation's Newborn Screening Translational Research Initiative (NSTRI). As a result of this relationship, The Evanosky Foundation has created a fund with the CDC Foundation to accomplish two very important objectives. First, it will focus on developing and implementing a test to screen all newborn babies for MLD in a public health environment. Second, it will create a dried blood spot (DBS) card repository, which would collect blood samples from people who are carriers or have been affected by MLD, so researchers

can help identify the criteria for "normal" and "abnormal" MLD tests. We at the Foundation know that this fund could never have been established if it were not for the generous contributions from our supporters. Thank you!
